

MVC Discussion Modules

Action Buttons/Links	Description of Use
	<p>To create a message in the discussion modules, click the “New Topic” button. On the next screen give your message a title in the “Subject” box, enter your message in the Message box, click “Check Spelling”, and then click “Send Message.”</p>
	<p>This module allows the instructor and all students in the class to post and respond to each other’s messages. This not a module for private messages.</p>
	<p>This module allows the instructor and students post messages and respond to messages anonymously.</p>
	<p>This module allows students on the same team to send and receive messages to and from each other. The instructor cannot communicate with students in this module.</p>
	<p>This module is usually selected with the “Team Discussion” module so that the different teams in the MVC class can communicate with the instructor. For example, when a member of Team B sends a message to the instructor, all Team B members can read the sent message. When the instructor responds to the message, all members of Team B can read the response.</p>
	<p>This module was created to give students a place to socialize. Instructors can access and view content placed in this module.</p>
